

Proposed architechure

FLOW OF THE PROJECT

- In this diagram tell about the working of the project. In this first block took a damaged car as an input.
- Once this image is given as an input after that they apply neural network is to be interesting for detecting the image hold the car.
- Car detection is done perfectly, then goes to the next step or else does not go to the next step.
- Detection of the car is done perfectly then analyse the damage of the car by applying the neural network check for car it may contain any damage then go to next step or does not process to the next step.
- They give the accurate result for the location of damaged car, and also give severity like minor moderate and severe.
